

To wholly or partly owned subsidiaries of multi-national chemical companies in Japan

Did you ever puzzle over the gaps identified by an area or corporate EH&S audit team of your company?

EHS Expert Services LLC (EES) will help/support to build safety and health programs and practices in alignment and compliance with your corporate standards or 1st class multi-national chemical companies. Focus is on life critical safety standards and process safety as major gaps are in here.

The founder has total 38 year work career in Dow Chemical and Cabot mostly in manufacturing, supply chain and EH&S functions. During this time he took a few key safety roles at a plant, country and Asia/Pacific levels including EH&S integration after M&A and EH&S standardization where the corporate standards and governance apply.

Other than internal EH&S initiatives, external operations were assessed at such business partners as contract manufacturers and logistic terminals. These activities were guided by the principle that states EH&S Excellence is the Core Value of the Company and the partners are equally expected to own and foster the same EH&S culture.

**Founder : EHS Expert Services LLC
Ryosuke Tamai**

EES provides EH&S expertise and hands-on backed up by operational experiences and with high cost performance.

EH&S Excellence

Same EH&S Culture
expected

Subsidiaries

Logistics Terminals

Contract Manufacturers

Core Value of the company

Why EES focuses on life critical safety and process safety?

Health and safety aspects of EH&S performance management are strongly directed by regulations and company culture, and this is where deviation is created in Japan since regulations and/or culture are not necessarily the same. EES provides support to the Japan local operation of multi-national chemical company or its subsidiary under management control to build health and safety protocols, implement and make them routine in compliance with parent company's. Life critical safety (LCS) and process safety (PS) are areas where more deviation is usually identified and this is where priority is set. Included protocols in LCS are, but not limited to, fall protection, confined space entry, line & equipment opening, hot work, isolation of energy, PPE. and safe work permit, and in PS are management of change and pre-startup safety review. In addition Root Cause Analysis and Corrective Action Tracking are common tools for continuous improvement. EES is to meet your demand on extra EH&S resources for a project, assessment of EH&S performance, EH&S training and any other initiatives to fill gaps in your resource requirements.

**Confined Space Entry ?
Lock-out/Tag-out ?
Line/Equipment Opening ?
Fall Protection / Hot Work ?
Safe Work Permit ?
Management of change?
Pre-startup review?**
